

# Xenograft Mega-Oss Bovine™

## 1. The new gold standard for Xenograft

Mega-Oss Bovine™ sincerely wants to be compared in quality with the Bio-Oss® (Geistlich, Switzerland).

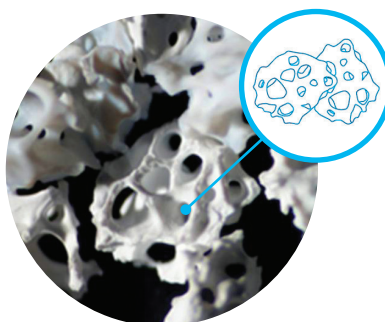

## 2. Superior porous structure

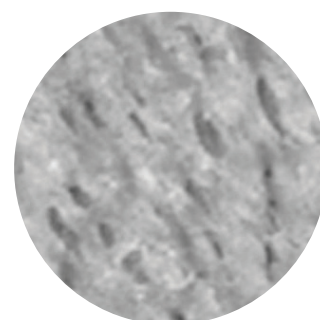

Mega-Oss Bovine™ is an inorganic natural bone material extracted from pure bovine bone from clean Australia which is officially recognized by BSE as safe and clean region. The organic part of the bovine bone is effectively removed through various processes, no additives are added during processing, and there is no risk of immunological rejection. All the products are produced in sterile processes with safe raw materials. Mega-Oss Bovine™ is biocompatible bone graft material with porous structure similar to human cancellous bone and stimulates new bone formation/growth in grafted site. It has more and wider pores offering excellent hydrophilicity and angiogenesis.

## 3. No crystallization with standard fusion temperature

The low-temperature deproteinizing process eliminates proteins effectively, but maintains the natural topography of cancellous bone with superior porosity.

**Superior porous structure**  
Proof of high multiporous structures

**No crystallization with standard fusion temperature**
