

Zero Bone Loss Concept (ZBLC):

LIVE WEBINAR

Predictable Crestal Bone Preservation in Implant Dentistry

YOUR SPEAKER

**PROF. TOMAS
LINKEVIČIUS**

DDS, DIP PROS, PHD

9 SEP 2026
18:00 UK time
ONLINE VIA ZOOM

Crestal bone loss remains one of the most debated challenges in implant dentistry — but is it truly inevitable? In this webinar, Prof. Tomas Linkevičius, world-renowned researcher and originator of the Zero Bone Loss Concept (ZBLC), presents the evidence-based protocols behind achieving stable, long-term crestal bone levels around dental implants.

Drawing on over a decade of clinical research, Prof. Linkevičius will break down the key biological and mechanical factors driving peri-implant bone remodelling — including mucosal thickness, implant-abutment connection design, and restorative platform switching — and demonstrate how clinicians can apply the ZBLC protocol in everyday practice to minimise bone loss and improve long-term implant success.
